
Virtual Grid Execution System: Fault Tolerance Planning and Run-time Rescheduling of Scientific Workflows

VGrADS Team

Nov 2007

Summary

- Demonstrate fault-tolerance atop virtual grids
- Fault-tolerance mechanisms
 - Over-provisioning during workflow planning
 - Rescheduling to respond to failures at runtime
- LEAD workflow - the driving application

VGrADS: NAM Initialized WRF Forecast [Copy to My Workflows](#)

Description

WRF Forecasting using NCEP NAM 40Km Initial Conditions and Lateral Boundary Data interpolated by ARPS Preprocessing Versions 5.2.8 & Forecast with WRF (ARW Core) Version 2.2. WRF output can be visualized with IDV (3D).
